

REGULATORY COMPLIANCE

# WPS - Quick Reference to Product Labels

The following summary is intended to help you comply with the U.S. EPA's Worker Protection Standard (WPS). If you're not sure whether your business is covered by this federal regulation, refer to the article on page E 2. It explains the responsibilities of agricultural employers and commercial pesticide applicators.

Pesticide products that are subject to the WPS must carry updated labeling. Look for the "Agricultural Use Requirement" box on the label. By October 23, 1996, all products being distributed or sold must bear final printed, replacement labeling that complies with the WPS. Before that date, manufacturers may provide supplemental labeling.

For major manufacturers, this list contains pesticide products that are used in agricultural production and are subject to the WPS. For other companies' products, check the label. Unless noted, the products in this chart have a federal registration. Individual states may restrict the use of certain products, however, so be sure to read the product label carefully.

This list has been compiled from information supplied to the *Farm Chemicals Handbook*, the *Weed Control Manual*, and the *Insect and Disease Control Guide*, as well as from individual product labels. This list is a helpful reference, but should not be regarded as a substitute for the product label. Always refer to the product label to ensure that you are using a pesticide properly and are in compliance with the WPS.

## How To Use This Table

For each product, you'll find the following information:

**Product name** – Information in chart applies to specific formulated products. Check your product label before using this chart.

**Manufacturer** – Products in this chart are grouped by manufacturer. If you don't know a product's manufacturer, look for the product name in the Sine Index on page A1.

**EPA registration number** – Issued by U.S. Environmental Protection Agency.

**Active ingredient(s)** – If the product is a premix, two or more active ingredients will be given.

**Restricted use pesticide (RUP) status** – In some cases, only certain uses of a product may be restricted. Always check the product label for complete information. Note: this information is not required for WPS information posting, but it indicates which products are subject to the federal recordkeeping rule for restricted use pesticides. Individual states may restrict other products, so review local regulations before using any pesticide.

**Signal Word** – Pesticides are labeled with a signal word based on their levels of toxicity. Class I pesticides carry the word "Danger" or "Danger-Poison." Class II pesticides are labeled "Warning," while Class III or IV products bear the signal word "Caution."

**Action(s)** – The product's major pesticidal activity. Refer to the abbreviations below.

**Worker notification** – Notification of a pesticide application must be given to all workers who will be within 1/4 mile of a field during the application or before the restricted-entry interval expires. This notification may be either oral or written, e.g., a posted sign at the entrances to treated sites. For some products, both oral and written notification is necessary.

**Restricted-entry Interval (REI)** – The time, in hours, before it is safe to reenter a field that has been treated with the product without wearing appropriate personal protective equipment and clothing for early entry. For some products, the REI may be different in arid areas, or it may vary depending on the crop or method of application. If the REI is footnoted in the chart, refer to the product label for clarification. Also note that in 1995, EPA reduced the REI for certain low-risk pesticide active ingredients from 12 to 4 hours.

**Personal protective equipment (PPE)** – The minimum protective clothing and equipment that is needed to safely handle or load the product. See explanation of letter codes below.

**Early entry PPE** – The minimum protective clothing and equipment that is needed to safely enter an area that has been sprayed with this pesticide before the REI has elapsed. See explanation of letter codes below. □

Action Word Abbreviations

AC..... Acaricide	IGR.....Insect Growth Regulator	OV.....Ovicide
AL..... Algicide	IN.....Insecticide	PGR.....Plant Growth Regulator
BA..... Bactericide	LA.....Larvicide	RE.....Repellent
BI..... Biostimulant	MI.....Miticide	RO.....Rodenticide
DE..... Defoliant	MO.....Molluscicide	SP.....Seed Protectant
FM..... Fumigant	NE.....Nematicide	ST.....Seed Treatment
FN..... Fungicide	NS.....Nitrogen Stabilizer	
HE..... Herbicide		

Personal Protective Equipment (PPE) Abbreviations

a....Long-sleeved shirt and long pants	h.... Chemical-resistant footwear plus socks
b....Coveralls	j.... Protective eyewear
c....Coveralls over short-sleeved shirt and short pants	k.... Chemical-resistant apron when cleaning equipment, mixing, or loading
d....Coveralls over long-sleeved shirt and long pants	l.... Chemical-resistant headgear for overhead exposure
e.... Water proof gloves	m.... Approved respirator
f....Chemical-resistant gloves	n.... Chemical-resistant protective suit
g....Shoes plus socks
