

Animal Breeding (Eldbora) :

Elwad Babikir one of the beneficiaries from the Artificial insemination program that had been implemented by the Watershed Management Project

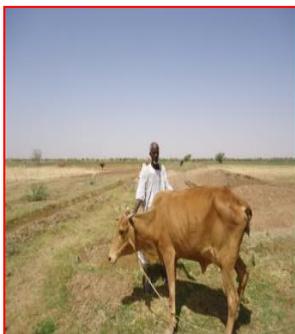

Elwad confirmed that the new born (calve) has a great economic value because he will change the genetic capacity of the local breeds of animals .

He said that many neighboring farmers want to adopt the (AI) idea if they can get access to this service because it will help them to improve their animals and increase the milk production.

In livestock Production, the Eastern Nile Watershed Management Project has conducted an AI Program to improves the genetic capacity, as well as increasing production of the rural farmers animals.
