

SIEMENS

RADIOTHERM 304

**A new
apparatus
for
MICROWAVE
DIATHERMY**

- * Accurately selective treatment with only slight warmth to fatty tissues
- * Simple operation
- * Automatic treatment timer
- * Operating frequency 2425 ± 25 megacycles
- * Continuous dose control in two ranges 2—25 watts and 20—200 watts
- * Complete range of accessories

Please write or telephone for details

Clayton's Electrotherapy and Actinotherapy

By PAULINE M. SCOTT, M.C.S.P., T.E.T., T.M.M.G., School of Physiotherapy, King's College Hospital, London. With a Foreword by F. S. Cooksey, O.B.E., M.D., F.R.C.P., Director of the Department of Physical Medicine, King's College Hospital, London.

A new edition of a standard textbook intended primarily for the use of physiotherapy students and is designed to cover the electrotherapy sections of the syllabus of both the preliminary and intermediate examinations of the Chartered Society of Physiotherapy.

It is divided into three parts: *Part I*—Electrotherapy Direct and Low Frequency Currents. *Part II*—Electrotherapy High Frequency Currents. *Part III*—Actinotherapy and Other Radiations. Some sections have been considerably revised, and a new chapter on Ultrasonic therapy has been included. Other sections have been rewritten, but the familiar layout of previous editions has been retained. The contents are now fully up to date, including details of the most recent developments in electrotherapeutic apparatus.

384 pages 200 illustrations 30s. postage 2s.

Muscles Alive— (their Functions revealed by Electromyography)

By J. V. BASMAJIAN, M.D.
Professor and Head of the Department of Anatomy, Queen's University, Kingston, Ontario, Canada.

This is a new book of some importance to all specialists in physical medicine. Largely based upon the electromyographic researches of the author and other workers in this field, it is the first modern comprehensive review of the integrated functions of the skeletal musculature—*what muscles actually do and how they co-ordinate one with another.*

278 pages 126 illustrations 68s. postage 3s.

Suspension Therapy in Rehabilitation

By MARGARET HOLLIS, M.C.S.P., Principal, School of Physiotherapy, Bradford Royal Infirmary, and MARGARET H. J. ROPER, M.C.S.P., Lecturer in Physiotherapy, University of Cape Town.

This book continues the pioneer work of the late Mrs. Guthrie Smith and is an up-to-date practical textbook on the subject. The first part deals in detail with mechanical principles, techniques and methods. The second part describes the clinical application of suspension, spring and pulley therapy to special conditions, including rheumatic disorders, special paraplegia amputation, geriatrics and nervous system disorders. These chapters have been contributed by different authors, each distinguished in their particular subject. The illustrations and working diagrams are striking features of this book.

"Both qualified physiotherapists and students will welcome this up-to-date textbook which has been written to help understanding of the techniques, potentialities and limitations of suspension therapy."—PHYSIOTHERAPY.

"An indispensable work for students of physiotherapy and those interested in suspension therapy and related fields . . ."—PHYSICAL EDUCATION ASSOCIATION BULLETIN.

232 pages 24 plates and 112 drawings

Occupational Therapy in Rehabilitation

Edited by E. M. MACDONALD, B.Litt., T.M.A.O.T., with the help of H. M. DAVIDSON, B.Sc., M.A.O.T., E. FOULDS, M.A.O.T., J. A. KENNEDY, M.C.S.P., O.N.C., R. SHAW, T.M.A.O.T., and Nineteen Contributors.

This book is principally intended to give an outline of Occupational Therapy which today plays an increasingly important part in rehabilitation of the sick and injured. It is written by twenty-four contributors, all of whom are expert in various aspects of occupational therapy and rehabilitation. The subject is presented in seven parts with a total of twenty-three chapters.

368 pages 9 plates 25 illustrations
