

BALANCED ESSENTIAL AMINO ACIDS

Gemini Protein is formulated to provide the dairy cow the bypass essential amino acids that she needs to make milk. The ideal combination of all 10 limiting amino acids can be obtained through one source of bypass protein: Gemini Protein

BALANCED ESSENTIAL AMINO ACIDS

Gemini Protein is a high quality protein supplement manufactured for use in dairy rations and represents the latest technology in protein nutrition. Modern dairy cows utilize large amounts of very specific proteins (amino acids) to produce high volumes of milk.

Gemini Protein matches the required protein (amino acids) used by the mammary gland in the production of milk. Gemini Protein takes the guesswork out of balancing a ration for amino acids. The product contains the required ratio of the 10 essential amino acids needed by the mammary gland to produce milk.

Gemini allows dairy nutritionists to move beyond the constraints of balancing for just one or two amino acids. Nutritionists can use Gemini technology to provide the correct amino acid balance for dairy rations without being concerned about the quality and nutritional accuracy of their bypass protein supplements.

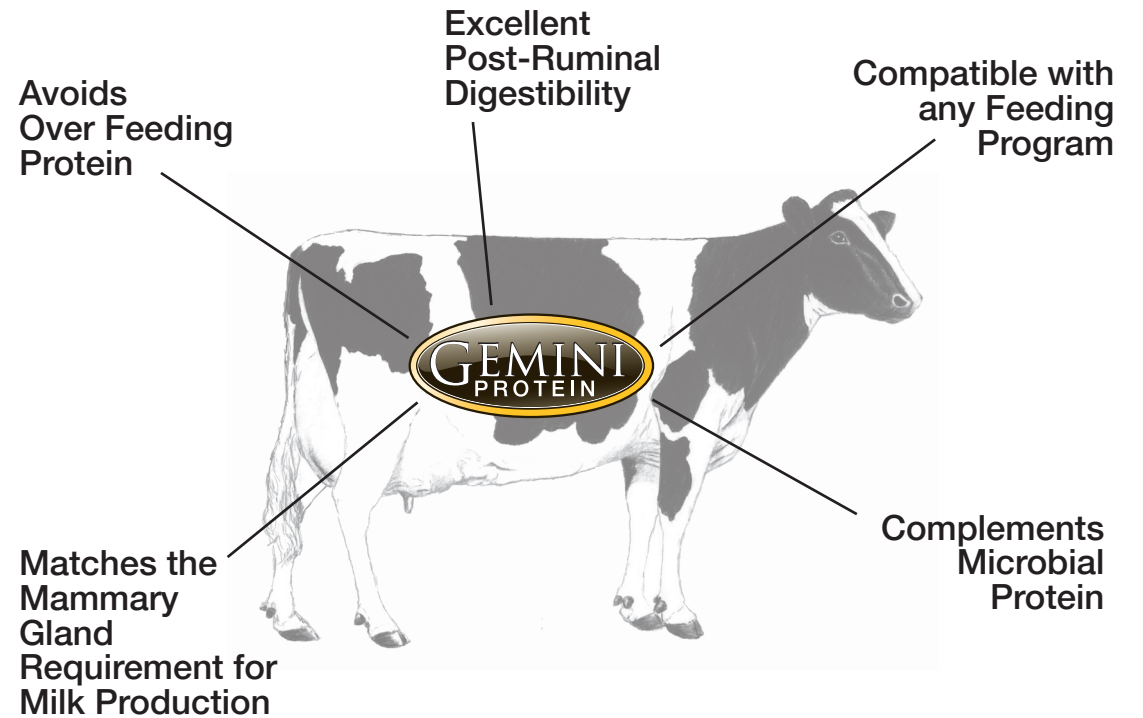

Gemini Protein's Balanced Amino Acids

- Methionine
- Lysine
- Arginine
- Threonine
- Leucine
- Isoleucine
- Valine
- Histidine
- Phenylalanine
- Tryptophan

**Gemini Protein
The New Edge in Protein Nutrition**

Gemini Protein used in your ration delivers:

- The amino acid profile required by the mammary gland
- Easy formulation with a variety of rations and forages
- A consistent source of high quality, digestible bypass protein
- A complete amino acid profile at a competitive price

GEMINI PROTEIN – PROVIDING THE PRECISE AMINO ACID PROFILE NECESSARY FOR EFFICIENT MILK PRODUCTION
